

QVDB/QDDT Core Domain class model V1.5

Comments to version 1.5

- Classes represent DDI 3.2 classes
- Light blue colour represents QDDT implementations while light yellow represents possible QVDB extensions
- Class Study (name in orange) is called StudyUnit in DDI
- Directed associations represent references of target objects by the source objects.
- Directed association (in orange) between Variable and QuestionAsnInstrument does not exist in DDI. We consider to include this for variable documentation purposes.

The meaning of references of classes to themselves:

- Association from Instrument to itself indicates that an instrument can have sub-instruments
- Association from Concept to itself is inherit in DDI
